Albuquerque District Office

At the heart of our efforts are soldiers, airmen, their families and the citizens of this great country.

Whatever we do must make a positive impact on their lives.

That's why we exist.

US Army Corps of Engineers

As the world's largest engineering organization, the US Army Corps of Engineers can perform all aspects of engineering, planning, design, construction and environmental restoration projects. We are committed to delivering quality projects and support for our customers and partners.

MAJOR PROGRAMS

Civil Works—encompasses a variety of projects of all sizes related to water resources. The Corps works with cost-sharing local sponsors to provide flood damage prevention, ecosystem restoration, and other types of projects to meet national and local needs.

Military Programs—support to military installations for development and maintenance of critical infrastructure.

Environmental—ensuring good stewardship of the nation's natural and cultural resources.

Acequias Program—support to Acequia Associations for maintaining and improving historic community irrigation systems.

Support for Others Program—support to federal, state and local agencies on a cost-reimbursable basis, for any of the full range of technical services the Corps has to offer.

Emergency Response—when a disaster strikes that exceeds local response capabilities, the Corps can help save lives, ease human suffering and mitigate property damage.

WHAT WE CAN DO FOR YOU

Albuquerque District is home to nearly 350 professionals from a wide variety of disciplines. In addition, we have access to all of the 35,000 members of the Corps of Engineers worldwide, as well as world-class contract support from top firms around the globe.
